Cloud DevOps Engineer

SUMMARY

Full Stack Java Developer with around 1 years of experience in building and deploying production grade web applications. Delivered three live projects, notably a Helpdesk Management System and an Online Compiler featuring role based access and cloud deployment on Docker containers. Combined Spring Boot back end expertise with React front end delivery, supporting MySQL data stores and CI/CD pipelines.

SKILLS

Programming Languages: Java, JavaScript, SQL, Python, Go

Backend Frameworks & APIs: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, REST APIs, JWT, Maven

Frontend Technologies: React.js, HTML5, CSS3, Responsive Web Design, React Leaflet, Recharts, Vite, USGS API

Databases: MySQL, Relational Database Design, CRUD Operations, Aiven Cloud MySQL

DevOps & Cloud Deployment: Docker, CI/CD, Kubernetes, Container technologies, Vercel, Render, Netlify

Tools & Methodologies: Git, GitHub, Postman, VS Code, Agile/Scrum, MVC Architecture, SDLC, API Integration, Clean Code

Cloud Platforms: AWS, GCP, Azure, Cloud computing

Scripting Languages: Bash, Shell scripting

Operating Systems: Unix/Linux

Observability Tools: Observability tools

Infrastructure as Code: Infrastructure as code

Microservices Architecture: Microservices architecture

WORK EXPERIENCE

ExcelR Solutions

Web Development Intern

Apr 2024 - Dec 2024

- Led version control strategy with Git across a 4 member sprint team, integrating daily pull request reviews and branch by feature workflow; delivered 6 front end React components in JavaScript, reducing feature cycle time by 20% while maintaining code review compliance.
- Engineered a Java Spring Boot microservice, containerized with Docker and deployed to Render via an automated CI/CD pipeline; served 1,200 concurrent users, cut API latency by 35% and ensured responsive UI performance across three device breakpoints using React.js.
- Developed Python ETL scripts to ingest USGS API datasets on a Unix/Linux VM, processing 500k records nightly and slashing manual data preparation effort by 80%.
- Authored Bash scripts on Unix/Linux to orchestrate Docker image builds and Render deployments, cutting release preparation time from hours to minutes and improving team automation reliability.
- Configured Vercel CI/CD integration for front end assets, triggering automatic builds on each merge and supporting up to 5 daily releases with zero downtime deployments.
- Defined Dockerfile and Docker Compose configurations as infrastructure as code artifacts, enabling reproducible development environments for the entire team and reducing onboarding setup time by 60%.

PROJECTS

TicketPro — Helpdesk Management System | [ticketpro-helpdesk-frontend.vercel.app/](https://github.com/Venukanna/ticketpro-helpdesk-frontend.vercel.app/)

- Built a full stack IT Helpdesk System with role based dashboards for Employees, Support Engineers, and Managers, simulating real enterprise support workflows.
- Developed REST APIs for ticket lifecycle, status transitions, history tracking, and dashboard metrics using layered Controller Service Repository architecture with MySQL.
- Implemented JWT based authentication via Spring Security for role based access control across three user types.
- Deployed on Render (backend), Vercel (frontend), Aiven Cloud MySQL; resolved CORS, cloud DB connectivity, and environment variable challenges.
- Source Code: GitHub Repository –<https://github.com/Venukanna/ticketpro-helpdesk-frontend.git>

Online Compiler with Test Case Support | [online-compiler-test-case-frontend.vercel.app/](https://github.com/Venukanna/online-compiler-test-case-frontend.vercel.app/)

- Built a full stack online compiler supporting browser based execution for HTML/CSS/JavaScript/React.
- Developed Spring Boot REST APIs for code compilation, custom input handling, test case evaluation, and result processing.
- Integrated Docker based isolated environments for secure multi language execution (Java, Python, C, C++).
- Source Code: GitHub Repository –<https://github.com/Venukanna/online-compiler-test-case-frontend.git>

Earthquake Visualizer | [earthquake-visualizer.netlify.app/](https://github.com/Venukanna/earthquake-visualizer.netlify.app/)

- Built a real time earthquake monitoring app using live USGS API data with geospatial map visualization and magnitude filtering.
- Implemented country search, date range analysis, tectonic plate overlays, and trend dashboards using React Leaflet and Recharts.
- Deployed on Netlify with responsive design, API error handling, and state management.
- Source Code: GitHub Repository –<https://github.com/Venukanna/Earthquake-Visualizer.git>

EDUCATION

CERTIFICATIONS

- Full Stack Java Development: ExcelR Solutions (2024)
- Java Full Stack Developer Internship: Aivariant (2024)
