

Dear Hiring Manager,

I am writing to express my interest in the Software Engineer position at Honeywell.

I graduated with a Bachelor of Science degree from Kakatiya University in 2025 and have developed a strong foundation in software development through hands-on projects, internship experience, and continuous learning. My technical skills include Java, Spring Boot, React.js, SQL, REST APIs, Git, and software development best practices.

During my internship and personal projects, I gained practical experience designing and developing software applications. One of my key projects, TicketPro, is a Helpdesk Management System built using Spring Boot, React.js, and MySQL. In this project, I implemented REST APIs, role-based authentication, database integration, and application deployment. I also developed an Online Compiler that supports code execution and test case evaluation, which strengthened my understanding of software architecture, debugging, and problem-solving.

What attracts me to Honeywell is the opportunity to work on innovative technologies that solve real-world challenges across industries. I am particularly interested in contributing to a team that values engineering excellence, continuous learning, and collaboration. I am eager to apply my technical knowledge while learning from experienced professionals and contributing to impactful software solutions.

I am a dedicated and adaptable individual with a strong willingness to learn new technologies and take on challenging responsibilities. I believe my project experience, technical foundation, and passion for software engineering make me a strong candidate for this position.

Thank you for considering my application. I would welcome the opportunity to discuss how my skills and enthusiasm can contribute to Honeywell's success.

Sincerely,

Venu Babu Banala
